About the conference

Brief Introduction

About the conference

MedTech & Regenerative Medicine and Dentistry

Background

The continuous innovation and development of medical technology provides new possibilities for medical diagnosis, treatment and management. From high-resolution medical imaging to robot-assisted surgery, from biosensors to telemedicine, medical technology is constantly improving patients' experience and health results.

Regenerative medicine and dentistry, as emerging fields, use emerging technologies such as stem cell technology, tissue engineering, and biofabrication to provide us with new ways to treat a variety of diseases and trauma.

This conference aims to provide a platform for top scientists from Australia and the world to present latest progresses in the field, share successes in clinic/industry translation, and analyze challenges faced and opportunities.
